

# Our New Technology

## New High Resolution Optomap Digital Eye Imaging Technology

The Optomap is a digital camera that takes a 200-degree high resolution image of the back of the eye. The doctors at Kennedy Vision are extremely concerned about eye and retinal health and highly recommend this technology. The Optomap allows us to document and track eye diseases such as macular degeneration, glaucoma, retinal holes, retinal detachments, and retinal tumors. Additionally, systemic diseases such as diabetes and high blood pressure can be detected with an Optomap retinal image.

### **Optomap Digital Imaging Provides:**

- A more comprehensive overview of eye and retinal health
- The ability to evaluate your retinal images during the exam today.
- A permanent medical record which allows a comparison for diagnosing and tracking retinal eye disease annually.
- In most cases, **eliminates the need to be dilated.**

The cost of this test is **\$39.00**, and is not covered by insurance.
