## High Resolution Optomap Digital Imaging Technology

The doctors at Kennedy Vision are extremely concerned about eye and retinal health and include imaging with Optomap as part of our mandatory standard of care. Optomap is a digital camera that takes a 200-degree high resolution image of the back of the eye. Optomap allows us to document and track eye diseases such as macular degeneration, glaucoma, retinal holes, retinal detachments, and retinal tumors. Additionally, systemic diseases such as diabetes and high blood pressure can be detected with an Optomap retinal image.

### Optomap Digital Imaging Provides:

- A more comprehensive overview of eye and retinal health.
- The ability to evaluate your retinal images during the exam today.
- A permanent medical record which allows a comparison for diagnosing and tracking retinal eye disease annually.
- In most cases, eliminates the need for dilation.

The cost of this test is \$39, and it is not covered by insurance. For patients under the age of 18, the cost is \$20.
